

Solar solar container battery placement requirements

Overview

Where should I put my solar battery?

Find out where the best place to put your solar battery. Also find out where you CAN'T put the battery. Solar batteries can be installed both indoors and outdoors in accordance with AS/NZS 5139:2019. The best location for them is the garage where it is out of direct sunlight.

How do I choose a solar battery installation?

Outdoor: Prioritize weather protection, heat management, and accessibility for durability. Always consult local building codes and a professional installer to ensure compliance and safety. A robust solar battery installation depends not only on where you place the system, but how you prepare for its long-term operation.

Should you install a solar battery in your home?

When it comes to residential energy storage, solar battery installation isn't just about connecting wires and flipping a switch. The location of your battery can significantly influence safety, performance, and lifespan—especially for integrators and system developers seeking long-term value and compliance.

Where should a battery energy storage system be installed?

The best location for them is the garage where it is out of direct sunlight. As per the Clean Energy Council regulations, all Battery Energy Storage systems needs to be installed to comply with the current versions of AS/NZS 5139:2019. In addition, all CEC-accredited persons need to comply with the current versions of the following standards:

Where Batteries Can and Can'T Be Installed
Outdoors
There are differences between installing batteries on a weatherboard house vs a brick house. The main consideration is that brick is non-combustible. As a result, batteries can be located with a bit more freedom. For weatherboard houses, you may need to install non-combustible material between the battery and the house in some circumstances.
