

# South African Electric Energy Storage Power Station

## Overview

---

How much energy storage capacity does South Africa have?

South Africa had 1,604.6kW of capacity in 2022 and this is expected to rise to 3,519.9kW by 2030. Listed below are the five largest energy storage projects by capacity in South Africa, according to GlobalData's power database. GlobalData uses proprietary data and analytics to provide a complete picture of the global energy storage segment.

Where is South Africa's nuclear power station located?

South Africa's single nuclear power station is situated in the Western Cape near Cape Town, while pumped storage facilities are located in the mountainous regions of the Drakensberg and Kogelberg. As a water-constrained country, South Africa has limited hydroelectric resources.

Why is battery storage important in South Africa?

In South Africa, battery storage is increasingly seen as a key pillar to help provide grid stability and integrate variable renewables given its ageing coal-fired power fleet and grid.

Will solar batteries help South Africa's energy grid?

South Africa's state-owned utility Eskom anticipates that these projects will showcase the effectiveness of batteries in facilitating the integration of renewable energy into the country's energy mix, while simultaneously easing the strain on the national electricity grid.
