

# **Southeast Asia solar solar container communication station Wind Power**

## Overview

---

Can solar and wind energy meet Southeast Asia's growing electricity demand?

The International Energy Agency's latest report says solar and wind energy are well placed to meet Southeast Asia's growing electricity demand. It adds that while additional deployment will create flexibility challenges, most countries in the region can integrate more solar and wind energy without requiring major system changes.

Is Southeast Asia ready for solar & wind?

IEA's report says Southeast Asia is well positioned to meet this surging demand using variable renewable energy (VRE) sources of solar and wind. It adds that there is 20 TW of untapped solar and wind potential across the region, around 55 times the region's current total generation capacity.

What is Southeast Asia's energy potential?

Southeast Asia's combined technical potential for utility-scale solar PV, onshore and offshore wind exceeds 20 terawatts. The region also has significant hydropower potential: Lao PDR produces more than 70% of its electricity supply from hydropower and is the largest clean electricity exporter in the region.

How many solar power plants are there in Southeast Asia?

Figure 8 A shows the distribution of solar, wind, and hydropower plants in Southeast Asia and their generating capacity. There are 246 solar power plants, 7 wind power plants, and 214 hydropower plants that were compared using the root mean square error (RMSE) and R 2.
