

# **The development direction and prospects of power station energy storage batteries**

## Overview

---

Are battery energy-storage technologies necessary for grid-scale energy storage?

The rise in renewable energy utilization is increasing demand for battery energy-storage technologies (BESTs). BESTs based on lithium-ion batteries are being developed and deployed. However, this technology alone does not meet all the requirements for grid-scale energy storage.

What types of battery technologies are being developed for grid-scale energy storage?

In this Review, we describe BESTs being developed for grid-scale energy storage, including high-energy, aqueous, redox flow, high-temperature and gas batteries. Battery technologies support various power system services, including providing grid support services and preventing curtailment.

Do geopolitical and economic factors influence battery technology development?

With the rapid expansion of lithium-ion batteries in electric vehicles and grid storage, effective end-of-life management strategies are essential to ensure sustainable material recovery and minimize environmental harm. Finally, this review does not extensively cover the geopolitical and economic factors influencing battery technology development.

Why do we need a battery energy-storage technology (best)?

BESTs are increasingly deployed, so critical challenges with respect to safety, cost, lifetime, end-of-life management and temperature adaptability need to be addressed. The rise in renewable energy utilization is increasing demand for battery energy-storage technologies (BESTs).
