Overview

What is a power inverter?

A power inverter is an electronic device that converts direct current (DC) power into alternating current (AC) power. In our website, you can find our wide selections of DC to AC inverters with power ratings from 75W to 5000W.

What is a 12V inverter?

12V Inverter. A 12V inverter is an electrical device that converts 12 volts of DC power into AC power. The input power typically comes from a 12V battery. Modified sine wave power inverter can provide you 110/120V or 220/230V/240V AC power.

How much power does an inverter need?

It's important to note what this means: In order for an inverter to put out the rated amount of power, it will need to have a power input that exceeds the output. For example, an inverter with a rated output power of 5,000 W and a peak efficiency of 95% requires an input power of 5,263 W to operate at full power.

How do you classify an inverter based on its power output?

Using the CEC efficiency, the input power to the inverter must be $P_{IN} = P_{OUT} / \text{CEC Efficiency} = 3,300 \text{ W} / 0.945 = 3,492 \text{ W}$. Inverters can be classed according to their power output. The following information is not set in stone, but it gives you an idea of the classifications and general power ranges associated with them.
