There are several ways to connect solar panels to the grid

Overview

How do I connect solar panels to the grid?

To connect solar panels to the grid, you need to install a bi-directional meter on your home. This allows energy produced by your solar panels to be fed into the grid when you're not using it, and for you to draw energy back from the grid when you need it.

Should you connect solar panels to the electrical grid?

Connecting solar panels to the electrical grid is one of the most effective ways to maximize your solar investment while maintaining reliable power. Grid-tied solar systems allow you to use solar energy during the day, sell excess power back to the utility through net metering, and draw from the grid when needed.

Why should you connect your solar system to the grid?

By connecting your solar system to the grid, you can consume the energy you produce and feed excess power back into the grid. This results in a symbiotic relationship between your solar panels and the utility grid, enabling you to draw power when needed and receive credits for the surplus energy you generate.

What does 'connecting solar to the grid' mean?

When we talk about “connecting solar to the grid,” we’re referring to the process of linking your solar energy system to the electrical grid, which is the network that delivers electricity to homes, businesses, and industries.
