

Uninterruptible power supply ups battery charging and discharging

Overview

This is a 3S output Uninterruptible Power Supply (UPS) module that supports simultaneous charging and discharging and can provide stable 5V/3.3V voltage output. It also supports IIC output and can displa.

What is a 3s output uninterruptible power supply (UPS) module?

This is a 3S output Uninterruptible Power Supply (UPS) module that supports simultaneous charging and discharging and can provide stable 5V/3.3V voltage output. It also supports IIC output and can display the IP address, battery voltage, current, power, and other parameters.

What makes a UPS uninterruptible?

Of the three main subsystems, the battery is what makes the system “uninterruptible”. Depending upon the system design, the battery can constitute as much as 50% of the cost of the UPS. Without a reliable battery, the operation of the entire data center can be put at risk.

How do I Choose an uninterruptible power supply for DC applications?

Our uninterruptible power supplies for DC applications provide reliable protection against supply interruptions. Select the appropriate DC UPS for your application. Our uninterruptible power supplies for AC applications provide a pure sine curve at the output. Select the ideal AC UPS and ensure superior system availability.

Why should you choose Phoenix Contact uninterruptible power supplies?

Ensure superior system availability with our power supply systems. Find out about power supplies, DC/DC converters, redundancy modules, and uninterruptible power supplies for various requirements and industries. Phoenix Contact uninterruptible power supplies for AC and DC applications provide reliable protection against supply interruptions.
