## Overview

---

Are green cellular base stations sustainable?

This study presents an overview of sustainable and green cellular base stations (BSs), which account for most of the energy consumed in cellular networks. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

How do cellular base stations reshape non-uniform energy supplies and energy demands?

These strategies use bidirectional energy flow to reshape the non-uniform energy supplies and energy demands over mobile networks. A joint spectrum and energy sharing method is presented in Guo et al. (2014b) between cellular base stations to minimize the OPEX.

Can Greentouch reduce energy consumption in communications networks?

GreenTouch. (2013). GreenTouch green meter research study: Reducing the net energy consumption in communications networks by up to 90% by (2020). A GreenTouch White Paper, no. Version, 1.

What is a green communication initiative?

The green communication initiative primarily aims to improve the energy efficiency, reduce the OPEX, and eliminate the GHG emissions of BSs to guarantee their future evolution [ 2, 3 ]. Cellular network operators attempt to shift toward green practices using two main approaches.
