

# **What base stations does Austrian Power have**

## Overview

---

How many power plants does Austria have?

Austria's leading electricity company operates around 130 hydro power plants, including highly efficient storage power plants in the Austrian Alps and run-of-river power plants on all the country's major rivers. At 33.8% (2023), transport is the economic sector with the largest consumption of energy in Austria.

How does Austria get its electricity?

The different network levels are connected via substations. Around 75% of Austria's electricity comes from renewable energy sources. Although hydropower has traditionally been the most important source of energy in Austria, wind and solar power have been heavily developed in recent years.

What if Austria didn't have electricity?

Taking wind, biomass and solar into account, renewable power generation rises to more than three-quarters of the country's total electricity production. Austria's last coal-fired power plant closed back in 2020. Without electricity, modern-day life would grind to a halt.

What percentage of Austria's electricity is renewable?

In 2023, renewable energy made up 87% of Austria's total electricity generation. Austria's leading electricity company operates around 130 hydro power plants, including highly efficient storage power plants in the Austrian Alps and run-of-river power plants on all the country's major rivers.
