

# **What does the battery manufacturer s pack mean**

## Overview

---

What is a battery pack?

A battery pack is the largest and most complex unit of a battery system. It is an integrated assembly of multiple battery modules or individual cells arranged in a specific configuration to meet the voltage and energy requirements of a particular application.

What does the S on a lithium battery pack mean?

The “S” in a lithium battery pack stands for “Series.” It indicates the number of cells connected in series. For instance, a 3S battery pack has three cells connected in series. If each cell is 3.7V, the total voltage of the pack is 11.1V ( $3.7V \times 3$ ).

What is the difference between a battery cell and a pack?

A battery cell is a battery’s basic unit, whereas a battery module is a collection of battery cells. A pack, on the other hand, consists of one or more modules as well as any other components required for operation, such as enclosure, connectors, and control circuitry. The following comparison chart demonstrates this in greater detail:.
