

# What energy storage does the power station rely on

## Overview

---

What are battery storage power stations?

Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

What are the core functions of energy storage power stations?

In addition to these core functions, functions such as anti-backflow protection, support for parallel/off-grid operation, and islanding protection further enhance the reliability and versatility of energy storage power stations.

Where is storage located in a power plant?

Storage can be located at a power plant, as a stand-alone resource on the transmission system, on the distribution system and at a customer's premise behind the meter. Do wind and solar need storage?

All power systems need flexibility, and this need increases with increased levels of wind and solar.

Can grid energy storage systems be used in residential settings?

Yes, residential grid energy storage systems, like home batteries, can store energy from rooftop solar panels or the grid when rates are low and provide power during peak hours or outages, enhancing sustainability and savings.
