

# What is BMS battery management

## Overview

---

What is battery management system (BMS)?

Battery Management System (BMS) is the “intelligent manager” of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.

What is a battery management system?

A battery management system is an electronic system that takes care of rechargeable batteries. It tracks how they work, calculates their status, reports data, controls their environment, and helps them operate safely throughout their life.

What makes a good battery management system?

A good battery management system (BMS) needs hardware components that work together to monitor, protect, and optimize battery performance. These components act as the system’s eyes and ears. They collect vital data that helps make smart decisions about battery safety and longevity.

Why do batteries need a BMS?

The BMS helps batteries last longer too. It balances cells so weaker ones don’t limit the pack’s performance or get damaged faster. By stopping deep discharge and overcharge, it protects against common causes of permanent capacity loss. Lithium-ion batteries need precise control. Most lithium cells work between 10.5V and 14.8V.
