How are thin-film modules made?

Thin-film modules are made by depositing a-Si onto a flexible polyimide substrate using proprietary roll to roll vacuum deposition and monolithic interconnect systems. Since manufacturing is completely roll-to-roll, new designs can quickly scale to high volume. 1 Inch fixed bend radius.

What makes PowerFilm solar panels different from traditional solar panels?

Flexible yet durable polyimide substrate enhances flexibility, paper thinness, and lighter weight. The substrate is as thin as 1mil (0.025mm) thick. Amorphous silicon is the absorber layer in the solar panels. The amount of silicon used in PowerFilm solar panels is as low as 1 percent of the amount used in traditional solar panels.

How thick is PowerFilm solar panels?
